What is VOYDEYA?

VOYDEYA (danicopan) is a prescription medicine used along with ravulizumab or eculizumab to treat breakdown of red blood cells that takes place outside of blood vessels (extravascular hemolysis), in adults with paroxysmal nocturnal hemoglobinuria (PNH).

What are the serious risks of VOYDEYA?

VOYDEYA is a medicine that may lower the ability of your immune system to fight infections.

VOYDEYA increases your chance of getting serious infections caused by encapsulated bacteria, including *Neisseria meningitidis*, *Streptococcus pneumoniae*, and *Haemophilus influenzae* type B. These serious infections may quickly become life-threatening and cause death if not recognized and treated early.

Call your healthcare provider or get emergency medical care right away if you get any of these signs and symptoms of a serious infection:

- Fever with or without chills
- Fever and a rash
- Fever with chest pain and cough
- Fever with breathlessness/fast breathing
- Fever with high heart rate
- Headache with nausea or vomiting
- Headache and a fever
- Headache with a stiff neck or stiff back
- Confusion
- Body aches with flu-like symptoms
- Clammy skin
- Eyes sensitive to light

Getting Your Vaccines

- You must complete or be up to date with the vaccines against *Neisseria meningitidis* and *Streptococcus pneumoniae* at least 2 weeks before your first dose of VOYDEYA.
- If you have not completed your vaccinations and VOYDEYA must be started right away, you should receive the required vaccinations as soon as possible.

- If you have not been vaccinated at least 2 weeks before your first VOYDEYA dose, and treatment with VOYDEYA must be started right away, you should also receive antibiotics to take for as long as your healthcare provider tells you.
- If you have been vaccinated against these bacteria in the past, you might need additional vaccinations before starting VOYDEYA. Your healthcare provider will decide if you need additional vaccinations.
- Vaccines do not prevent all infections caused by encapsulated bacteria.
- Keep your vaccination records in a safe place and notify your healthcare provider that you have been vaccinated.

Your healthcare provider and the certified pharmacy may contact you to verify your vaccination records before your medicine is provided to you.

Patient Safety Card

You will receive a **Patient Safety Card** from your healthcare provider about the risk of serious infections.

- Carry this card with you at all times during treatment and for 1 week after your last VOYDEYA dose. Your risk of serious infections may continue for a few days after your last dose of VOYDEYA.
- **Show this card to any healthcare provider who treats you. This will help them diagnose and treat you quickly.**

What is the VOYDEYA REMS?

A Risk Evaluation and Mitigation Strategy (REMS) is a drug safety program that the US Food and Drug Administration (FDA) can require for certain medicines to ensure they are used safely. When there is a REMS, drug companies, healthcare providers, and pharmacies must take extra steps to make sure the benefits of using the drug are greater than the risks.

VOYDEYA has a REMS because it can increase your chance of getting serious infections caused by encapsulated bacteria. Serious infections may quickly become life-threatening and cause death if not recognized and treated early.
